

# new products equipment

**Case packer** The Model 101 case packer is designed with complete gripper assemblies for all pack/bottle patterns each packager requires to eliminate time-consuming gripper adjustment. Guide rail placement is simplified with sliding and locking handles to allow quick adjustment to the new specification. Changeover is completed in three steps. The machine packs glass and plastic bottles, jugs, jars and specialty shapes, as well as metal and composite cans and many styles of cartons. The servo-driven pick-and-place operation ensures gentle product handling to maintain container and label integrity, and containers are packed under full control from the conveyor to the shipper.

**Continuous inkjet printer** The LINX 7900 Continuous Ink Jet Coder features LINX Insight remote monitoring via smartphone, QuickSwitch software for code

changes with a bar code scanner and easy message transfer between printers using a USB port. The printer also features a hermetically-sealed printhead with no moving parts and no manual adjustments to make. It can print up to three lines of text, logos, bar codes and 2D Data Matrix codes, with five-line upgrade available.

**Case erector** The CE-TRS Transrector All Servo Case Erector uses servo motors on all dimension points to obtain case changeover in less than five minutes. The changeover

is completed on the HMI. With the push of a button, the CE-TRS will automatically adjust to the required case size. The only manual action the operator has to complete is placing the stacks of cases on the Flat Stack magazine. A Cartesian robot is used to erect the case, which eliminates tabs and pins on a magazine. The case erecting process limits the risk of case damage and warpage due to side seam glue issues.
